

TektInn
Customized Engineering Solutions

Company Profile

"engineering the future"

TektInn at a glance

TektInn is a Greek based company with head offices in Athens that specializes in the feasibility study, design and consulting of structural and infrastructural projects, including a wide range of services such as 3D visualization, dioramas, project management as well as customized technical solutions for distinctive engineering projects. TektInn covers the uprising market gap in terms of combining quality and excellence with certain and competitive budget.

Our vision is summarized in our quote *engineering the future*. This means that our way of thinking focuses on innovation thus on differentiating from common and monotonous solutions. For us, each study should tackle the specific technical problem that is upraised therefore our approach includes brainstorming, invention and vivid imagination.

consistently striving
to attain our goals

Why us?

Unlike our competitors, we **diversify** by adding extra value and prosperity to our results. Before we commence any task, we examine carefully all the necessary parameters in order to optimize the outcome. Key factors that accept optimization are for example the geometry, materials, structural integrity, technologies and last but not least the budget. Actually, any existing pattern or rule is being filtered before we follow it; then we blend it with the most up to date methodologies, therefore we manage to produce wonderful masterpieces, covering the most difficult demands.

We, pledge to act with **integrity** at all times, especially when facing difficulties or challenges.

"Integrity" refers to our compliance with the highest ethical standards, our fairness and honesty in conducting every activity and our perseverance in pursuing the ideal forms for our operations and management. Through the demonstration of these qualities, we show our commitment to building trust and confidence in all the people around us and our determination to continue to expand our business.

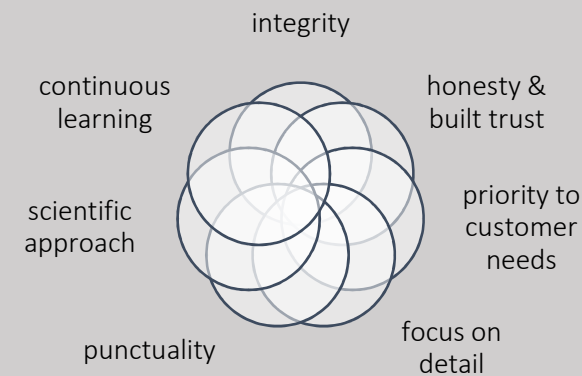

We **collaborate** with a trusted team of experienced architects, mechanical & electrical engineers, solicitors, interior designers and technicians to produce the highest quality results.

our mission

is to cover the market demand for optimized, up to date engineering results, which constitute a project feasible, aesthetic and accurate

Our aim is to treat your interests like our own.

Our principles and fundamental beliefs that help us towards a common goal can be defined by our seven main **core values**.

Our philosophy is customer driven.

Therefore we are working closely with our customers, providing the reliable service they are looking for.

philosophy

Intellectual Design Supplies

Panic & Safety Rooms
Cargo Cable Ways & Funiculars
Carbon Fiber Structures
Military Medium Scale Projects
Beach Bars As A Kit
Self-Sustained Greenhouses
Superhydrophobic Pools
